CoDaBix Web Configuration 1

Known Issues

The current version of CoDaBix (1.0.x) contains the following known issues, which will be fixed in a later version:

CoDaBix Web Configuration

- On some Windows systems, performance of the **embedded Chromium browser** in the Codabix application can sometimes be slow (e.g. due to software rendering). If this happens on your machine, you can try to use a separate browser like [Microsoft Edge](#), [Google Chrome](#), or [Mozilla Firefox](#) to open the Codabix Web Configuration (e.g. using URL <http://localhost:8181/>).
- In the **User Groups** view, when you right-click on a user group and select **Nodes**, the dialog can take quite some time to open if you have a lot of nodes created. To give a user group access to specific nodes, you can instead go into the **Nodes** view and right-click on a node and select **User Group**.
